

EXPERIENCE

GoodLeap

Mar. 2025 – Present

Staff Product Manager, VPP

- Scaled GoodLeap's VPP from 0 to 100+ MW, aggregating 15,000+ home batteries into a multi-state, multi-technology grid-services platform integrating batteries and thermostats across CA, TX, and the Northeast.
- Designed and launched a next-generation DERMS platform featuring automated enrollment, post-event dashboards, AI-driven insights, a data-exploration suite, customer account management, and a multi-scenario event scheduler.
- Led integrations with Tesla, Enphase, SolarEdge, FranklinWH, EnergyHub, Uplight, Lunar Energy, and others, consolidating DER control into the GoodLeap GEMS platform and enabling real-time dispatch, capacity forecasting, and telemetry.
- Owned product strategy and operations for GoodLeap's expansion with Reliant/NRG, David Energy, and the launch of GoodGrid, GoodLeap's retail energy provider offering in Texas.
- Built GoodLeap's end-to-end VPP orchestration and reporting engine, delivering accurate SOC tracking, dispatch-performance analytics, automated post-event settlement and impact reporting, and optimized event operations achieving a 96% participation rate.
- Enabled new partnership through alignment with executives at utilities, OEMs, technology partners, and competitors, accelerating GoodLeap's growth as both a VPP operator and financing partner.
- Management of a VPP operations and primary internal and external point of contact responsible for seamless program launches and performance.

Fluence Energy

2024

Senior Technical Product Manager, Platform

- Launched global rollout of Fluence's OS7 control and dispatch software estimated to enable \$5 billion in new projects in FY 2025.
- Led three agile teams of 22 people across software development, architecture, design, and QA focused on data integration, Fluence OS User Interface, Configuration & Deployment tools, and Project Commissioning Automation.
- Managed the organization, prioritization, and completion of 230+ known defects which reduced commissioning time by several months and improved usability.
- Enabled launch of GridStack Pro product line and new market entry through definition and prioritization of new features via deployment of 2 major and 4 minor releases.
- Planned strategy and led coalition of 80 stakeholders to sunset previous operating system software versions and upgrade procedures to OS7 for 225 energy storage projects around the world making up 11.1 Gigawatts.

General Motors | GM Energy

2023 – 2024

Senior Product Manager

- Owned 3 products and mentored 2 associate product managers. Led GM Energy Emissions Intelligence, Electric Vehicle V1G & V2H utility managed charging programs in the GM Energy virtual power plant (VPP), and the Microgrid Command Center as an integrated control and monitoring platform across different distributed energy resources including EVs, EVSE, solar, & BTM batteries.
- Launched EV smart charging programs via demand response and TOU signals with DTE, Duke Energy, Eversource Energy, NHEC, NRG, SMUD, and Xcel Energy resulting in growth of active users by 60% and a new business model worth 300% more than prior contracts.
- Owned the design of the GM Virtual Power Plant and end-to-end customer experience, including enhanced customer notifications, charging schedules, desktop & mobile interface, APIs, customer success analytics, and product operations.
- Launched emissions analytics and energy management system (EMS) platform for B2B customers with a 2024 profit estimate of \$8 million. Led product development, GTM strategy, regulatory landscape analysis, trained sales team, and negotiated contracts.
- Built financial business cases, developed roadmaps, wrote (4) product requirements documents & a 60-page market requirements document, developed epics & features, served as an in-house expert on utilities and US energy markets.

NRG

2019 – 2023

Manager, New Business Incubation

- Business lead for an intelligent demand response mobile app that connects to users home smart devices and reduces energy consumption based on the wholesale price of electricity, then rewards users with cryptocurrency and cash for participation.
- Led team of 16, owned P&L, with an annual budget of \$2.6M encompassing engineering, design, research, and marketing.
- Cultivated partnership and drove contracting forward with Honeywell Resideo for smart thermostat integration.
- Validated 33 hypotheses through 26 customer interviews, 10 concept and usability interviews, and surveys.
- Prioritized product roadmap with developers, aligning the product vision with the market needs and business strategy. Reached Beta release 3 months before forecast, saving \$110K in 3rd party development costs.
- Launched 3 microsites with ad campaigns to A/B test value proposition, copy, and channel traction. Validated CAC and sign-up rates.

EXPERIENCE - continued

NRG

Product Manager, Innovation

- Product leader for two brands, Bounce Energy & SimplySmart, in NRG's long-term innovation group. B2B and B2C sustainability products including renewable energy certificates, community solar, energy brokerage, and retail rate arbitrage.
- Directed coalition from 6 departments to quickly sunset unproductive business resulting in \$203K of annual contract savings.
- Led team of 7 with an annual budget of \$800K, pivoted product through ideation of new disruptive business models.
- Planned and executed research activities including, surveys, interviews, explainer videos, microsite smoke tests, and pilot programs to discover key pain points, A/B test the customer experience, and continuously refine the product strategy.

Senior Data Analyst

- Analyzed energy market bidding, settlement, wholesale market pricing, and demand forecasts for NRG trading & supply desk.
- Feature prioritization to improve \$350M load forecast through model scorecard, automated notifications, and improved UI.
- Managed project with 2 developers to build on-shelf analytics suite consisting of 20+ KPIs for quick insights and trends.
- Migrated 1 million customers from two acquisitions into forecasting processes through developing 20+ modular python scripts that incorporate data wrangling, developing 5 models, model prioritization, and automated processing for the trading desk to make deals.
- Saved \$2MM in annual costs through a ~1% WMAPE improvement in forecasts through model optimization and data intelligence.

Entergy

2015-2018

Product Manager

- Managed financial modeling, sprints, backlog, product roadmap, and customer research on two products: Power Through which uses generators as a distributed energy resource with demand response capabilities and a B2C Home Energy Management product.
- Launched a flexible distributed energy resource within MISO to serve as a backup power product for large grocery stores like HEB resulting in savings of hundreds of thousands of dollars in product waste per store when outages occur.

Analyst III & Economist

Academy Sports + Outdoors

2010-2015

Pricing Analyst

Customer Experience Team Lead

EDUCATION

HEC Paris <i>Master of Science in Innovation and Entrepreneurship</i>	2021
Texas A&M University <i>Bachelor of Science in Economics, Minor in Business Administration</i>	2013
Clean Energy Leadership Institute (CELI) Fellowship	2025
Certified Scrum Product Owner Certified Scrum Master Scrum Alliance	2022
Reforge Alumni Mastering Product Management & Growth Series	2022
Interaction Design Foundation	2019
Business and Financial Modeling Specialization University of Pennsylvania - Wharton	2018
